EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Anne Vachon Dougherty. The application has been amended as follows:

2. In claims 6, 16, and 32, replace "code for" by "means for"

Allowable Subject Matter

3. Claims 1-20 and 27-36 are allowed.
4. The following is an examiner's statement of reasons for allowance:
 - a. Applicant discloses a transaction authorization method which operates over a plurality of interconnected computers and a plurality of resources. The method assembles an electronic authorization of a transaction in a manner that is verifiable by extracting and verifying whether role certificates of at least one type, associated with the authorization, are themselves authentic. Applicant's invention is novel and innovative in the sense that it makes anonymous authorization decisions based on roles, represented by anonymous role certificates. In this manner, the identities of the employees need not be divulged

when verifying the authenticity of the transaction. Applicant's invention further involves inter-enterprise authorization, a hashed version of the authorization tree is used, thus providing proof that a given user is authorized to perform a transaction while revealing minimal information about the approval structures of the company. In this manner, the method allows verification of a company's decision structures in such a manner as to obscure the details of this structure. Sudia et al (U.S. PG Pub No. 20020029337) teach system for securely using digital signatures in a commercial cryptographic system that allows industry-wide security policy and authorization information to be encoded into the signatures and certificates by employing attribute certificates to enforce policy and authorization requirements. Verification of policy and authorization requirements is enforced in the system by restricting access to public keys to users who have digitally signed and agreed to follow rules of the system. These rules can also ensure that payment is made for public and private key usage. Sudia et al fail to teach or suggest the invention as disclose by Applicant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
